

We claim:

1. Water-insoluble water-swella-
5 ble hydrogels coated with steric
or electrostatic spacers, characterized by the following pre-
coating features:
 - Absorbency Under Load (AUL) (0.7 psi) of at least 20 g/g,
 - Gel strength of at least 1 600 Pa.
- 10 2. Hydrogels as claimed in claim 1, characterized by the follo-
wing post-coating features:
 - Centrifuge Retention Capacity (CRC) of at least 24 g/g,
 - 15 - Saline Flow Conductivity (SFC) of at least
 $30 \times 10^{-7} \text{ cm}^3\text{s/g}$ and
 - Free Swell Rte (FSR) of at least 0.15 g/g and/or Vortex
Time of not more than 160 s.
- 20 3. Hydrogels as claimed in claim 1 or 2, wherein the steric
spacers are selected from bentonites, zeolites, active car-
bons and silicas.
- 25 4. Hydrogels as claimed in claim 1 or 2, wherein the electrosta-
tic spacers are cationic polymers.
5. Hydrogels as claimed in claim 3, wherein the steric spacers
are applied to the surface of the hydrogel in an amount of
from 0.05 to 5% by weight, based on the total weight of the
30 coated hydrogels.
6. A water-absorbent composition containing water-insoluble
water-swella- ble hydrogels as claimed in any of claims 1 to 5.
- 35 7. A water-absorbent composition as claimed in claim 6, wherein
the water-swella- ble hydrogels are embedded as particles in a
polymer fiber matrix or an open-celled polymer foam, fixed on
a sheetlike base material or present as particles in chambers
formed from a base material.
- 40 8. The process for producing water-absorbent compositions as
claimed in claim 6 by
 - preparing the water-swella- ble hydrogels,
 - 45 - coating the hydrogels with a steric or electrostatic
spacer and

30

- introducing the hydrogels into a polymer fiber matrix or an open-celled polymer foam or into chambers formed from a base material or fixing on a sheetlike base material.

5 9. The use of water-absorbent compositions as claimed in either of claims 6 and 7 for producing hygiene articles or other articles for absorbing aqueous fluids.

10 10. Hygiene articles containing a water-absorbent composition as claimed in either of claims 6 and 7 between a liquid-pervious topsheet and a liquid-impervious backsheet.

11. Hygiene articles as claimed in claim 10 in the form of diapers, sanitary napkins and incontinence products.

15

12. The method for improving the performance profile of water-absorbent compositions by enhancing the permeability, capacity and swell rate of the water-absorbent compositions by use of water-insoluble water-swella-
20 of claims 1 to 5.

13. The method for determining water-absorbent compositions possessing high permeability, capacity and swell rate by measuring the Absorbency Under Load (AUL) and the gel strength of
25 uncoated hydrogels and determining the Centrifuge Retention Capacity (CRC), Saline Flow Conductivity (SFC) and Free Swell Rate (FSR) of the coated hydrogels for given water-absorbent compositions and determining the water-absorbent compositions for which the hydrogels exhibit the property spectrum mentioned in claim 1 or 2.
30

14. The use of water-insoluble water-swella-
35 bility, capacity and swell rate.
